Concepts of Biology Samantha Fowler 2018-01-07 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

The Punishment Imperative Todd R. Clear 2013-11-01 “Backed up by the best science, Todd Clear and Natasha Frost make a compelling case for why the nation's forty-year embrace of the punitive spirit has been morally bankrupt and endangered public safety. But this is far more than an exposé of correctional failure. Recognizing that a policy turning point is at hand, Clear and Frost provide a practical blueprint for choosing a different correctional future—counsel that is wise and should be widely followed.”—Francis T. Cullen, Distinguished Research Professor of Criminal Justice, University of Cincinnati Over the last 35 years, the US penal system has grown at a rate unprecedented in US history—five times larger than in the past and grossly out of scale with the rest of the world. This growth was part of a sustained and intentional effort to “get tough” on crime, and characterizes a time when no policy options were acceptable save for those that increased penalties. In *The Punishment Imperative*, eminent criminologists Todd R. Clear and Natasha A. Frost argue that America's move to mass incarceration from the 1960s to the early 2000s was more than just a response to crime or a collection of policies adopted in isolation; it was a grand social experiment. Tracing a wide array of trends related to the criminal justice system, *The Punishment Imperative* charts the rise of penal severity in America and speculates that a variety of forces—fiscal, political, and evidentiary—have finally come together to bring this great social experiment to an end. Clear and Frost stress that while the doubling of the crime rate in the late 1960s represented one of the most pressing social problems at the time, this is not what served as a foundation for the great punishment experiment. Rather, it was the way crime posed a political problem—and thereby offered a political opportunity—that became the basis for the great rise in punishment. The authors claim that the punishment imperative is a particularly insidious social experiment because the actual goal was never articulated, the full array of consequences was never considered, and the momentum built even as the forces driving the policy shifts diminished. Clear and Frost argue that the public's growing realization that the severe policies themselves, not growing crime rates, were the main cause of increased incarceration eventually led to a surge of interest in taking a more rehabilitative, pragmatic, and cooperative

approach to dealing with criminal offenders. The Punishment Imperative cautions that the legacy of the grand experiment of the past forty years will be difficult to escape. However, the authors suggest that the United States now stands at the threshold of a new era in penal policy, and they offer several practical and pragmatic policy solutions to changing the criminal justice system's approach to punishment. Part historical study, part forward-looking policy analysis, The Punishment Imperative is a compelling study of a generation of crime and punishment in America. Todd R. Clear is Dean of the School of Criminal Justice at Rutgers University. He is the author of Imprisoning Communities and What Is Community Justice? and the founding editor of the journal Criminology & Public Policy.

Into the Wild Jon Krakauer 2009-09-22 Krakauer's page-turning bestseller explores a famed missing person mystery while unraveling the larger riddles it holds: the profound pull of the American wilderness on our imagination; the allure of high-risk activities to young men of a certain cast of mind; the complex, charged bond between fathers and sons. "Terrifying... Eloquent... A heart-rending drama of human yearning." —New York Times In April 1992 a young man from a well-to-do family hitchhiked to Alaska and walked alone into the wilderness north of Mt. McKinley. He had given \$25,000 in savings to charity, abandoned his car and most of his possessions, burned all the cash in his wallet, and invented a new life for himself. Four months later, his decomposed body was found by a moose hunter. How Christopher Johnson McCandless came to die is the unforgettable story of Into the Wild. Immediately after graduating from college in 1991, McCandless had roamed through the West and Southwest on a vision quest like those made by his heroes Jack London and John Muir. In the Mojave Desert he abandoned his car, stripped it of its license plates, and burned all of his cash. He would give himself a new name, Alexander Supertramp, and, unencumbered by money and belongings, he would be free to wallow in the raw, unfiltered experiences that nature presented. Craving a blank spot on the map, McCandless simply threw the maps away. Leaving behind his desperate parents and sister, he vanished into the wild. Jon Krakauer constructs a clarifying prism through which he reassembles the disquieting facts of McCandless's short life. Admitting an interest that borders on obsession, he searches for the clues to the drives and desires that propelled McCandless. When McCandless's innocent mistakes turn out to be irreversible and fatal, he becomes the stuff of tabloid headlines and is dismissed for his naiveté, pretensions, and hubris. He is said to have had a death wish but wanting to die is a very different thing from being compelled to look over the edge. Krakauer brings McCandless's uncompromising pilgrimage out of the shadows,

and the peril, adversity, and renunciation sought by this enigmatic young man are illuminated with a rare understanding--and not an ounce of sentimentality. Mesmerizing, heartbreaking, *Into the Wild* is a tour de force. The power and luminosity of Jon Krakauer's storytelling blaze through every page.

A Catholic Reading Guide to Conditional Immortality Robert Wild 2016-10-21 Like many other people, the long tradition about hell has been a source of serious confusion and distress for me. Over the past six years or so I was relieved to discover two other alternatives that are also part of the Christian tradition, though less prominent--universalism and the subject of the present book, conditional immortality. Universalism--that everyone would eventually be saved--did not, in the final analysis, seem to really come to grips with the overwhelming scriptural testimony that some kind of radical fateful decision is possible to people. Conditional immortality--that people who absolutely refuse God's plan for them will be taken out of existence--seems to me the best scriptural understanding of what the Lord meant by "losing one's soul"--not everlasting punishment but the withdrawal of existence. This book is an attempt to explain this theological theory. It is not presented as a definite dogma or teaching of the church, but as one of the possible results of a persistent and irrevocable decision against God.

The Sports Gene David Epstein 2014-04-29 The New York Times bestseller – with a new afterword about early specialization in youth sports – from the author of *Range: Why Generalists Triumph in a Specialized World*. The debate is as old as physical competition. Are stars like Usain Bolt, Michael Phelps, and Serena Williams genetic freaks put on Earth to dominate their respective sports? Or are they simply normal people who overcame their biological limits through sheer force of will and obsessive training? In this controversial and engaging exploration of athletic success and the so-called 10,000-hour rule, David Epstein tackles the great nature vs. nurture debate and traces how far science has come in solving it. Through on-the-ground reporting from below the equator and above the Arctic Circle, revealing conversations with leading scientists and Olympic champions, and interviews with athletes who have rare genetic mutations or physical traits, Epstein forces us to rethink the very nature of athleticism.

A Guide to Teaching in the Active Learning Classroom Paul Baepler 2016-06-03 While Active Learning Classrooms, or ALCs, offer rich new environments for learning, they present many new challenges to faculty because, among other things, they eliminate the room's central focal point and disrupt the conventional seating plan to which faculty and students have become accustomed. The importance of learning how to use these classrooms well and to capitalize on their special features is paramount. The potential they represent can be realized only when they facilitate improved learning outcomes and engage students in the learning process in a manner different from traditional classrooms and lecture halls. This book provides an introduction to ALCs, briefly covering their history and then synthesizing the research on these spaces to provide faculty with empirically based, practical guidance on how to use these unfamiliar spaces effectively. Among the questions this book addresses are: • How can instructors mitigate the apparent lack of a central focal point in the space? • What types of learning activities work well in the ALCs and take advantage of the affordances of the room? • How can teachers address familiar classroom-management challenges in these unfamiliar spaces? • If assessment and rapid feedback are critical in active learning, how do they work in a room filled with circular tables and no central focus point? • How do instructors

balance group learning with the needs of the larger class? • How can students be held accountable when many will necessarily have their backs facing the instructor? • How can instructors evaluate the effectiveness of their teaching in these spaces? This book is intended for faculty preparing to teach in or already working in this new classroom environment; for administrators planning to create ALCs or experimenting with provisionally designed rooms; and for faculty developers helping teachers transition to using these new spaces.
