Service Oriented, Holonic and Multi-agent Manufacturing Systems for Industry of the Future Theodor Borangiu 2019-08-02 This proceedings book presents selected peer-reviewed papers from the 9th International Workshop on 'Service Oriented, Holonic and Multi-agent Manufacturing Systems for the Industry of the Future' organized by Universitat Politècnica de València, Spain, and held on October 3–4, 2019. The SOHOMA 2019 Workshop aimed to foster innovation in the digital transformation of manufacturing and logistics by promoting new concepts and methods and solutions through service orientation in holonic and agent-based control with distributed intelligence. The book provides insights into the theme of the SOHOMA'19 Workshop – 'Smart anything everywhere – the vertical and horizontal manufacturing integration, ' addressing 'Industry of the Future' (IoF), a term used to describe the 4th industrial revolution initiated by a new generation of adaptive, fully connected, analytical and highly efficient robotized manufacturing systems. This global IoF model describes a new stage of manufacturing, that is fully automatized and uses advanced information, communication and control technologies such as industrial IoT, cyber-physical production systems, cloud manufacturing, resource virtualization, product intelligence, and digital twin, edge and fog computing. It presents the IoF interconnection of distributed manufacturing entities using a 'system-of-systems' approach, discussing new types of highly interconnected and self-organizing production resources in the entire value chain; and new types of intelligent decision-making support based on from real-time production data collected from resources, products and machine learning processing. This book is intended for researchers and engineers working in the manufacturing value chain, and specialists developing computer-based control and robotics solutions for the 'Industry of the Future'. It is also a valuable resource for master's and Ph.D. students in engineering sciences programs.

Complex Words Livia Körtvélyessy 2020-10-31 A state-of-the-art survey of complex words, this volume brings together a team of leading international morphologists to demonstrate the wealth and breadth of the study of word-formation. Encompassing methodological, empirical and theoretical approaches, each chapter presents the results of cutting-edge research into linguistic complexity, including lexico-semantic aspects of complex words, the structure of complex words, and corpus-based case studies. Drawing on examples from a wide range of languages, it covers both general aspects of word-formation, and aspects specific to particular languages, such as English, French, Greek, Basque, Spanish, German and Slovak. Theoretical considerations are supported by a number of in-depth case studies focusing on the role of affixes, as well as word-formation processes such as compounding, affixation and conversion. Attention is also devoted to typological issues in word-formation. The book will be an invaluable resource for academic researchers and graduate students interested in morphology, linguistic typology and corpus linguistics.

The Narrow Corridor Daron Acemoglu 2020-09-22 "Why is it so difficult to develop and sustain liberal democracy? The best recent work on this subject comes from a remarkable pair of scholars, Daron Acemoglu and James A. Robinson. In their latest book, The Narrow Corridor, they have answered this question with great insight." -Fareed Zakaria, The Washington Post From the authors of the international bestseller Why Nations Fail, a crucial new big-picture framework that answers the question of how liberty flourishes in some states but falls to authoritarianism or anarchy in others--and explains how it can continue to thrive despite new threats. In Why Nations Fail, Daron Acemoglu and James A. Robinson argued that countries rise and fall based not on culture, geography, or chance, but on the power of their institutions. In their new book, they build a new theory about liberty and how to achieve it, drawing a wealth of evidence from both current affairs and disparate threads of world history. Liberty is hardly the "natural" order of things. In most places and at most times, the strong have dominated the weak and human freedom has been quashed by force or by customs and norms. Either states have been too weak to protect individuals from these threats, or states have been too strong for people to protect themselves from despotism. Liberty emerges only when a delicate and precarious balance is struck between state and society. There is a Western myth that political liberty is a durable construct, arrived at by a process of "enlightenment." This static view is a fantasy, the authors argue. In reality, the corridor to liberty is narrow and stays open only via a fundamental and incessant struggle between state and society: The authors look to the American Civil Rights Movement, Europe's early and recent history, the Zapotec civilization circa 500 BCE, and Lagos's efforts to uproot corruption and institute government accountability to illustrate what it takes to get and stay in the corridor. But they also examine Chinese imperial history, colonialism in the Pacific, India's caste system, Saudi Arabia's suffocating cage of norms, and the "Paper Leviathan" of many Latin American and African nations to show how countries can drift away from it, and explain the feedback loops that make liberty harder to achieve. Today we are in the midst of a time of wrenching destabilization. We need liberty more than ever, and yet the corridor to liberty is becoming narrower and more treacherous. The danger on the horizon is not "just" the loss of our political freedom, however grim that is in itself; it is also the disintegration of the prosperity and safety that critically depend on liberty. The opposite of the corridor of liberty is the road to ruin.

Handbook of Stemmatology Philipp Roelli 2020-09-07 Stemmatology studies aspects of textual criticism that use genealogical methods to analyse a set of copies of a text whose autograph has been lost. This handbook is the first to cover the entire field, encompassing both theoretical and practical aspects of traditional as well as modern digital methods and their history. As an art (ars), stemmatology's main goal is editing and thus presenting to the reader a historical text in the most satisfactory way. As a more abstract discipline (scientia), it is interested in the general principles of how texts change in the process of being copied. Thirty eight experts from all of the fields involved have joined forces to write this handbook, whose eight chapters cover material aspects of text traditions, the genesis and methods of traditional "Lachmannian" textual criticism and the objections raised against it, as well as modern digital methods used in the field. The two concluding chapters take a closer look at how this approach towards texts and textual criticism has developed in some disciplines of textual scholarship and compare methods used in other fields that deal with "descent with modification". The handbook thus serves as an introduction to this interdisciplinary field.

The Glock Exotic Weapons System Anonymous 2001-07-01 Shooters prize the semiautomatic Glock for its reliability and ease of use. But what many may not know is that with a few scraps of metal and some simple hand tools, the amateur tinkerer can convert any Glock to full automatic. The conversion design detailed in this book allows properly licensed individuals to transform a regular semiauto pistol into one that delivers selective-fire operation without altering the major components of the gun such as the receiver (frame) or slide. Step-by-step instructions, professionally prepared technical illustrations of weapon functions in semi and full-auto combined with high-quality photos showing the modified factory components and their proper relationships with the full-auto conversion parts allow the reader to clearly see and understand how the whole system works. Warning: Actual construction of the weapon described in this book may be illegal under federal, state, and local laws. All BATF rules apply, and the BATF actively pursues and prosecutes anyone who violates federal gun statutes. Therefore, this book is for academic study only.

A Handbook of Management Theories and Models for Office Environments and Services Vitalija Danivska 2021-08-03 Although workplace design and management are gaining more and more attention from modern organizations, workplace research is still very fragmented and spread across multiple disciplines in academia. There are several books on the market related to workplaces, facility management (FM), and corporate real estate management (CREM) disciplines, but few open up a theoretical and practical discussion across multiple theories from different disciplines. Therefore, workplace researchers are not aware of all the angles from which workplace management and effects of workplace design on employees has been or could be studied. A lot of knowledge is lost between disciplines, and sadly, many insights do not reach workplace managers in practice. Therefore, this new book series is started by associate professor Rianne Appel-Meulenbroek (Eindhoven University of Technology, the Netherlands) and postdoc researcher Vitalija Danivska (Aalto University, Finland) as editors, published by Routledge. It is titled 'Transdisciplinary Workplace Research and Management' because it bundles important research insights from different disciplinary fields and shows its relevance for both academic workplace research and workplace management in practice. The books will address the complexity of the transdisciplinary angle necessary to solve ongoing workplace-related issues in practice, such as knowledge worker productivity, office use, and more strategic management. In addition, the editors work towards further collaboration and integration of the necessary disciplines for further development of the workplace field in research and in practice. This book series is relevant for workplace experts both in academia and industry. This second book in the series focuses on the role of workplace management in the organization and the tasks that workplace management needs to consider. The 18 theories that are presented in this book and applied to workplace research discuss management aspects from the organization's perspective or dive deeper into issues related to people and/or building management. They all emphasize that workplace management is a complex matter that requires more strategic attention in order to add value for various stakeholders. The final chapter of the book describes a first step towards integrating the presented theories into an interdisciplinary framework for developing a grand workplace management theory.

Experimental and Quasi-Experimental Designs for Research Donald T. Campbell 2015-09-03 We shall examine the validity of 16 experimental designs against 12 common threats to valid inference. By experiment we refer to that portion of research in which variables are manipulated and their effects upon other variables observed. It is well to distinguish the particular role of this chapter. It is not a chapter on experimental design in the Fisher (1925, 1935) tradition, in which an experimenter having complete mastery can schedule treatments and measurements for optimal statistical efficiency, with complexity of design emerging only from that goal of efficiency. Insofar as the designs discussed in the present chapter become complex, it is because of the intransigency of the environment: because, that is, of the experimenter's lack of complete control.
